

**RAJALAKSHMI ENGINEERING COLLEGE,
CHENNAI**

Department of Artificial Intelligence & Data Science

CS23633 – Cloud Computing Laboratory

Faculty: DAYALIN LEENA / AP (SS) / AI&DS

Experiment 5: Cloud Migration – Backup Setup experiment using Google Drive as the cloud storage service.

Aim

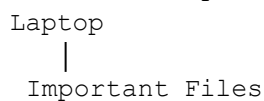

To create a cloud backup system by storing important files in Google Drive, scheduling automatic backups, and verifying successful backup completion.

What is Cloud Backup?

Cloud Backup means storing a copy of your important files on cloud servers instead of only keeping them on your computer.

Example

Without Backup

If the laptop crashes, the files may be lost.

With Cloud Backup

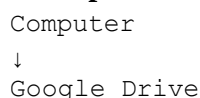

Even if the laptop fails, the files are safe in the cloud.

What is Cloud Migration?

Cloud Migration means moving your files, applications, or data from your local computer to a cloud service.

Example

Requirements

- Windows 10/11
- Google Account
- Internet Connection

PART A – Create Sample Data Step 1

Create a folder on the Desktop.

Name it OfficeData

Step 2

Inside the folder create three text files.

Example

Student.txt

Attendance.txt

Marks.txt

Write some sample content in each file.

Example

Student.txt

Name : Student

Department : AI & DS

Attendance.txt

Attendance : 95%

Marks.txt

Cloud Computing : 98

Now your folder looks like

OfficeData

├ Student.txt

├ Attendance.txt

└ Marks.txt

PART B – Create Cloud Storage

Step 3 Open

<https://drive.google.com>

Login with your Google account.

Step 4

Click

+ New Choose

Folder

Create

CloudBackup

PART C – Upload Files Step 5 Open

CloudBackup

Click

+ New

↓

File Upload

Choose all three files.

Click

Open

Google Drive uploads the files.

Now you have

Google Drive

CloudBackup

|— Student.txt

|— Attendance.txt |—

Marks.txt

Congratulations!

You have migrated your files to the cloud.

PART D – Install Google Drive for Desktop

Step 6 Open

<https://www.google.com/drive/download/>

Download

Google Drive for Desktop

Install it.

Login using the same Google account.

PART E – Enable Folder Synchronization Step 7 Open

Google Drive Settings

Click

Add Folder

Select

Desktop

↓

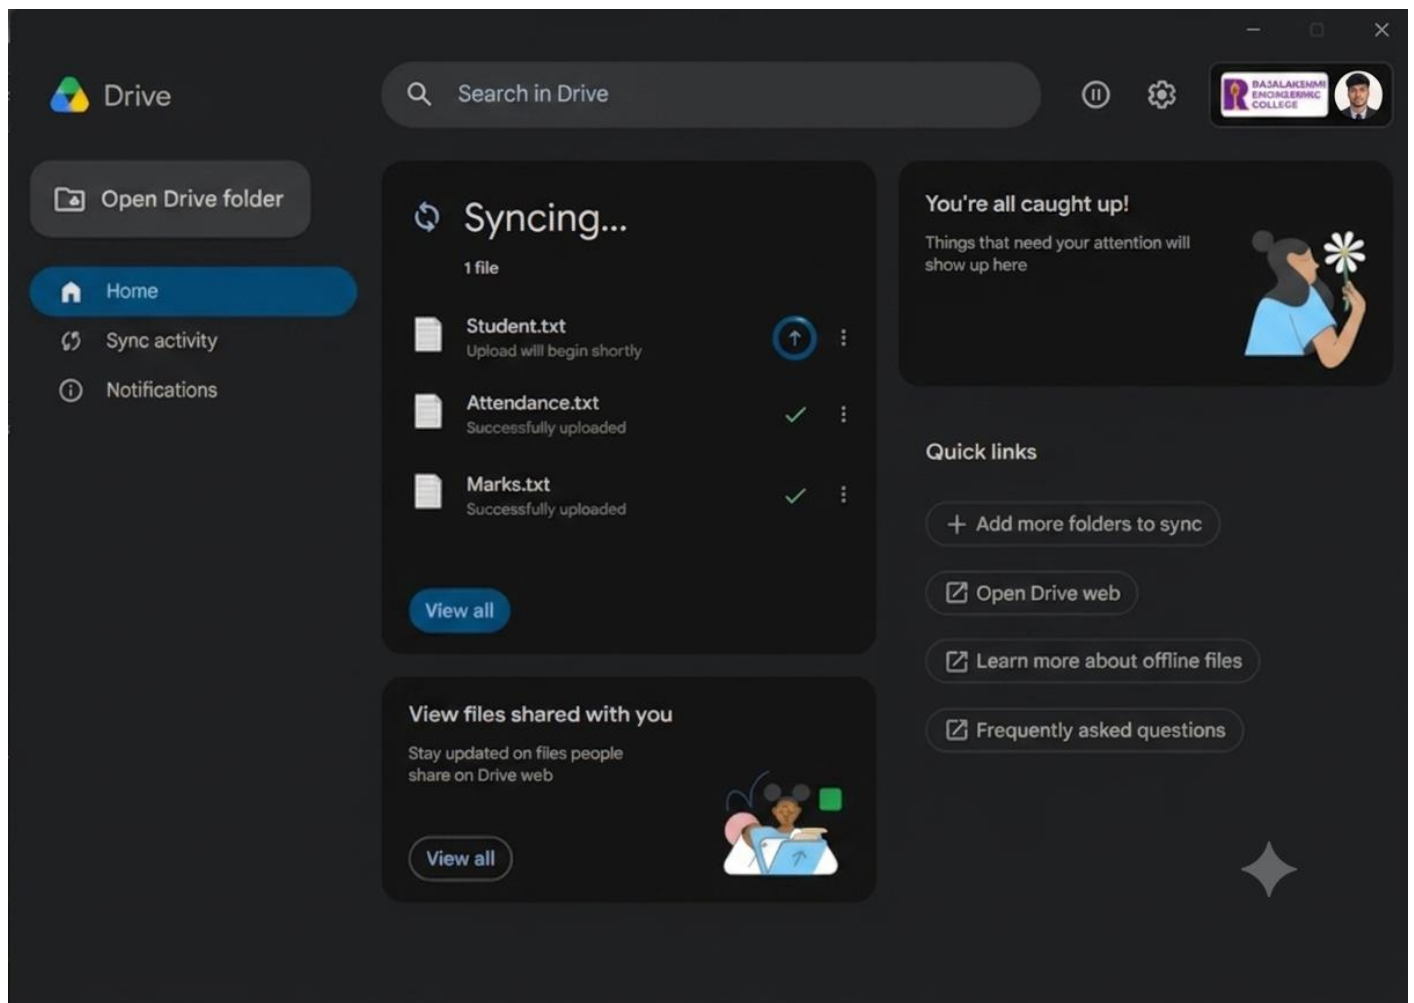

OfficeData

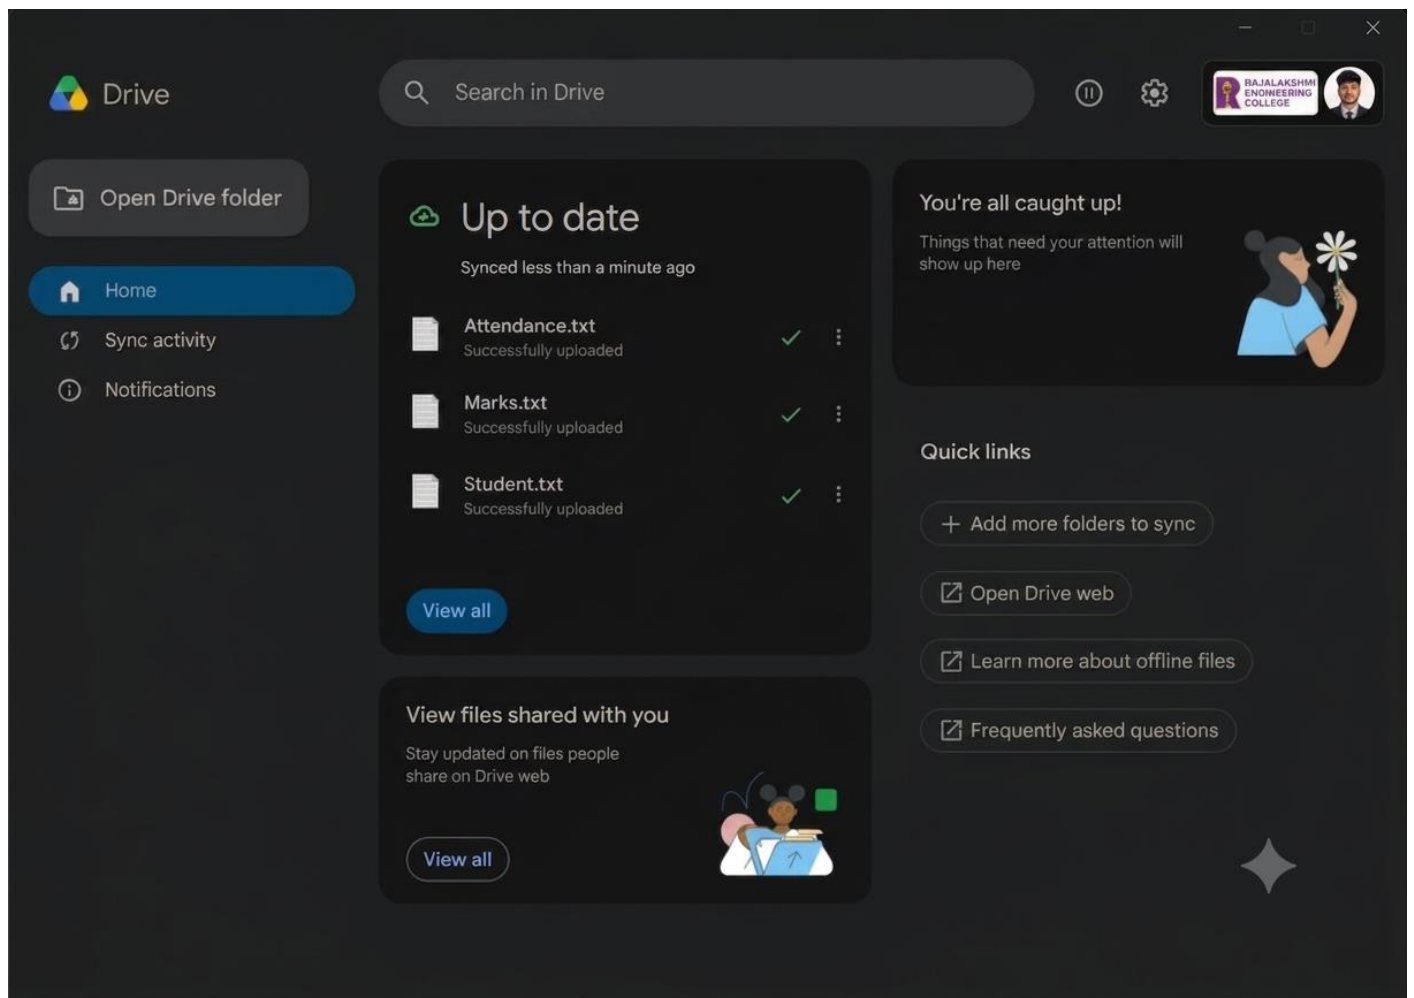

Enable

Sync with Google Drive

Click

Done

Step 1: Verify the files in the cloud

Click Open Drive web on the right side.

This will open your Google Drive in the browser.

Then look for the folder containing your synchronized files. You should find: OfficeData

- ├── Marks.txt
- ├── Attendance.txt
- └── Student.txt

Step 2: Perform the backup test

Now let's prove that automatic backup works.

Go back to your local OfficeData folder.

Open:

Student.txt

Add this line at the bottom:

Cloud Backup Test - Successfully Synchronized Save
the file.

Step 3: Wait for synchronization Wait

about 10–30 seconds.

Open the Google Drive application again.

You should see the file become: *Successfully uploaded / Up to date*

Step 4: Verify from Google Drive Web Refresh

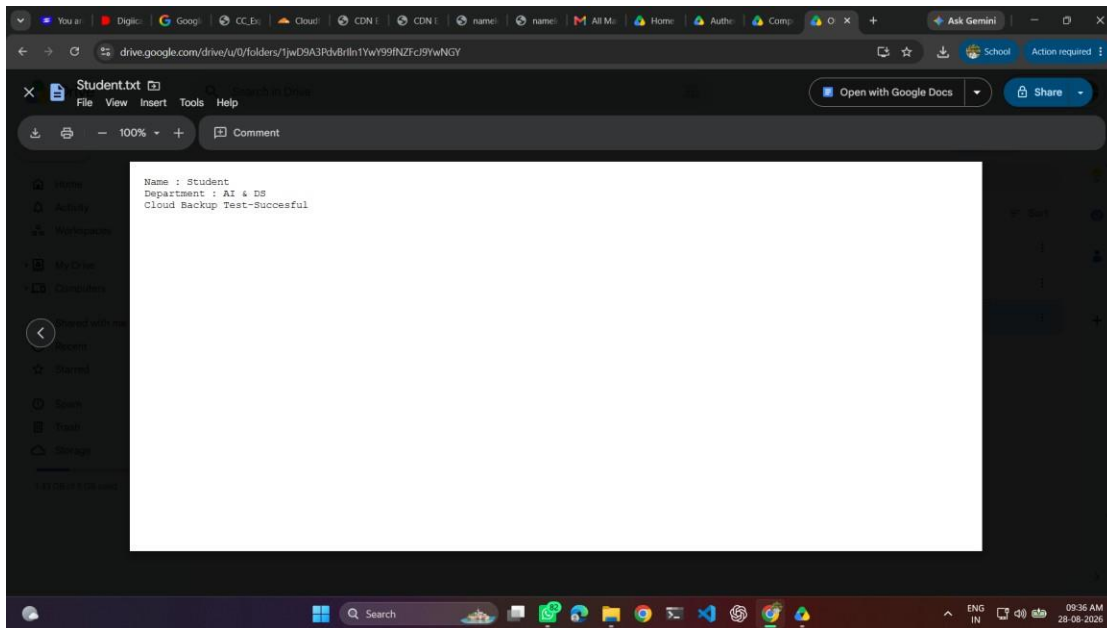

Google Drive in your browser.

Open Student.txt.

You should now see:

Cloud Backup Test - Successfully Synchronized

This proves that a change made to your local data was automatically backed up to the cloud.

Conclusion:

The cloud backup setup was successfully completed using Google Drive. Local files were migrated to cloud storage, automatic synchronization was enabled, and updates to local files were successfully reflected in the cloud, demonstrating an effective cloud backup mechanism.
